

Win more bids without growing the team.

RocketRFP turns a 50-page RFP into a structured checklist in minutes, then drafts 60-80% of your response from a knowledge base of your past wins, certifications, and standard answers. Your team reviews, refines, and ships -- instead of starting from a blank page.

3-7 days > 2-4 hrs

per response

60-80%

auto-completed by AI

10x

more bids, same headcount

How it works

- 1. UPLOAD** Drag a PDF/Word RFP, or paste a portal URL.
- 2. EXTRACT** AI structures every question and required deliverable in ~2 minutes.
- 3. DRAFT** AI populates a side-by-side canvas using your private knowledge base.
- 4. REFINE** Edit, accept, or chat with the KB to fill gaps. Confidence scores flag review items.
- 5. EXPORT** Filled PDF/Word in original format, or quick-copy for web portals.

Why it wins

- Side-by-side canvas, not a black-box generator -- every answer is editable
- Sources every draft from your KB; flags low-confidence items for review
- Handles PDFs, Word, and web portal forms (where most tools give up)
- Won proposals feed back into the KB, so quality compounds over time

Built for the enterprise

- Per-tenant isolation; encrypted at rest and in transit
- SSO + role-based access (admin / reviewer / contributor)
- Signed, expiring file URLs
- LLM-agnostic -- Claude, GPT, or private/local model option

See it on one of your live RFPs.

30-minute working session -- we'll show you the draft your team would have spent three days producing.
