1. EXECUTIVE SUMMARY

Timeless Technology Solutions (TTS) is pleased to submit this proposal in response to Lakewood Home Services RFP No. LHS-2024-011 for a Customer Portal and Field Service Management System. TTS brings over twelve years of experience delivering web-based platforms for service-industry clients, with deep expertise in scheduling, dispatch, and customer self-service solutions.

We understand that Lakewood Home Services requires a unified platform allowing homeowners to schedule appointments, track technician arrival, view service history, and pay invoices online—while giving field technicians real-time job details via a mobile application and dispatchers a live scheduling board.

TTS proposes a **React/Next.js customer portal** backed by a **Node.js REST API** and **PostgreSQL** database, with a progressive-web-app (PWA) for field technicians. The engagement will be delivered over **28 weeks** at a total fixed price of **\$187,500**, inclusive of all design, development, testing, training, and first-year hosting support.

2. COMPANY QUALIFICATIONS

Timeless Technology Solutions, LLC was founded in 2012 and is headquartered in Nashville, Tennessee. We are a certified Minority Business Enterprise (MBE) with 47 full-time employees including software engineers, UX designers, QA analysts, and project managers. Our ISO 9001:2015-certified quality management system governs every engagement.

Relevant Project Experience

BlueSky HVAC – Service Dispatch Portal (2023)

Delivered a scheduling and dispatch platform for a 120-technician HVAC company serving the Southeast US. System processes 1,400+ work orders per week.

Premier Pest Control – Customer Self-Service (2022)

Built a React-based portal enabling customers to book, reschedule, and pay online. Reduced call-center volume by 31% within six months of launch.

Riverstone Landscaping – Mobile Field App (2023)

Developed a PWA for 60 field crews with offline capability, GPS check-in/out, photo capture, and digital signatures for service confirmation.

3. TECHNICAL APPROACH

TTS will employ an Agile delivery model with two-week sprints, weekly client demos, and a shared project management board accessible to Lakewood stakeholders throughout the engagement.

Architecture Overview

The solution is composed of three integrated layers:

- **Customer Portal (Web):** Next.js 14 with server-side rendering for SEO and performance; Tailwind CSS for responsive design; Stripe for payment processing.

- **Dispatcher Dashboard:** React SPA with drag-and-drop scheduling board (FullCalendar), real-time technician location updates via WebSockets, and role-based access control.
- **Technician PWA:** Installable on iOS/Android; offline-capable job queue with background sync; camera API for photo capture; e-signature capture.
- **Backend API:** Node.js 20 + Express with OpenAPI 3.0 documentation; JWT authentication; rate limiting and input validation via Zod.
- **Database:** PostgreSQL 16 with PostGIS extension for technician geolocation; Redis for session cache and real-time pub/sub.
- **Infrastructure:** AWS (ECS Fargate + RDS Aurora); CloudFront CDN; CI/CD via GitHub Actions; automated backups with 30-day retention.

Security & Compliance

- TLS 1.3 enforced on all endpoints; HSTS and CSP headers configured.
- PCI-DSS SAQ A compliance via Stripe-hosted checkout; no card data stored.
- RBAC with least-privilege principle; audit log of all data mutations.
- Annual third-party penetration test included in Year 1 support.

4. PROJECT SCHEDULE

Phase	Deliverable	Duration	Target Date
Phase 1	Discovery, requirements finalization, UX wireframes	3 weeks	Week 3
Phase 2	Database schema, API skeleton, auth system	4 weeks	Week 7
Phase 3	Customer portal — booking & account management	5 weeks	Week 12
Phase 4	Dispatcher dashboard & scheduling board	5 weeks	Week 17
Phase 5	Technician PWA & offline sync	4 weeks	Week 21
Phase 6	Payment integration, notifications, invoicing	3 weeks	Week 24
Phase 7	UAT, performance testing, staff training	2 weeks	Week 26
Phase 8	Production deployment & go-live support	2 weeks	Week 28

5. PRICING

Item	Description	Hours	Rate	Cost
Discovery	Requirements workshops, UX research, wireframes	120	\$125	\$15,000
UX/UI Design	High-fidelity mockups, design system, prototypes	160	\$115	\$18,400

Backend Dev	REST API, database, authentication, integrations	480	\$140	\$67,200
Frontend Dev	Customer portal, dispatcher dashboard	440	\$130	\$57,200
PWA Dev	Technician mobile app with offline capability	200	\$130	\$26,000
QA & Testing	Unit, integration, E2E, load, security testing	120	\$110	\$13,200
Training	Admin, dispatcher, and technician training sessions	40	\$125	\$5,000
Year 1 Support	Hosting, monitoring, bug fixes, minor enhancements	N/A	Fixed	\$15,000
			TOTAL	\$216,000

Payment Schedule: 20% upon contract execution (\$43,200); 20% at Phase 2 completion; 30% at Phase 5 completion; 20% at UAT sign-off; 10% at go-live (\$21,600).

Note: The above pricing is fixed for the defined scope. Change requests outside the agreed scope will be estimated separately and require written approval.

6. PROPOSED TEAM

Role	Name	Experience
Engagement Manager	Marcus Webb	14 yrs — PMP certified, 20+ delivered projects
Solution Architect	Dr. Priya Nair	11 yrs — AWS Solutions Architect Pro
Lead Backend Engineer	Damon Carter	9 yrs — Node.js, PostgreSQL, microservices
Lead Frontend Engineer	Sofia Mendoza	8 yrs — React, Next.js, PWA specialist
UX Designer	Kenji Watanabe	7 yrs — Figma, user research, accessibility
QA Lead	Amber Holloway	6 yrs — Playwright, k6, OWASP testing

7. TERMS & CONDITIONS

- This proposal is valid for 90 days from the date of submission.
 - Intellectual property developed under this engagement transfers to Lakewood Home Services upon final payment.
 - TTS maintains a \$2M general liability and \$2M professional liability insurance policy.
 - Disputes shall be resolved under the laws of the State of Tennessee.
 - TTS will execute a mutual NDA prior to project commencement.
-
